About Me

Flexible Software Engineer ensured timely completion of software tasks by collaborating effectively with team members, and project managers. has a thorough understanding of the whole development process and expertise with a variety of front- and back-end technologies. wrote and evaluated code with an emphasis on producing high-caliber outcomes.

Professional Experience

Settlin - Linking Spaces Technologies Pvt. Ltd

Junior Software Engineer

August 2022 - Current

- Actively took part in the development stage, helping to provide innovative features for a range of projects. This participation included using both knowledge of technology and creativity, which improved the projects' overall success and functioning.
- Oversaw a team of one person while also providing leadership and assistance to two other team members in the completion of their responsibilities. To guarantee the proper execution of their individual tasks.
- Used ClickUp as a task management application, making effective use of its capabilities to allocate and arrange work. This technique increased overall job monitoring and completion by facilitating quicker communication among the team.

Personal Projects

Before joining my first company, I independently developed and hosted a few projects on my own Linux server, including:

- **URL Shortener:** Created a unique URL shortening program to manage links more effectively.
- **Personal Portfolio:** Created a personal portfolio website to showcase skills, projects, and professional background.
- **Crypto Price Tracker:** Designed and implemented a cryptocurrency price tracking tool.
- **29 Card Game:** Developed a 29-card game allowing users to play against the system.
