HOBBIES

- Learning about new Technologies
- Traveling and Exploring

ABOUT ME

I am a javascript developer and a graduate with a degree in Computer Science Engineering. I am proficient in both vanilla and ES6 javascript. I have experience with a variety of frameworks and libraries, including React, Node.js, and Express. I am confident in my abilities to work on a wide range of projects. I am looking for a new opportunity where I can use my skills and abilities to contribute value to an organization.

PROJECTS

URL Shortner

URL Shortner generates a unique Base 58 Short URL. NodeJs server continuously checks if a URL is not used for a long time then it removes it from the Mongo database. Users can save their URLs by logging in. Users also have a limit on the number of URLs they can shorten in a specific period of time.

Crypto Tracker

Crypto tracker tracks the current price of famous cryptocurrencies. This project I did by seeing a youtube tutorial and the channel name is Roadside coder. Here I have implemented React Router 6 and MUI 5.

Portfolio Website

My Portfolio is built using ReactJs and MUI5. Messaging is done using mailjet API which sends the message back to my email id. To secure my mailjet secret keys from client-side NodeJs Server as a relay is being used. There is also a restriction on the number of messages that can be sent from one IP Address.

29 Playing Card Game

Played in a group of four people, 29 is a strategic game that tests players' ability to think ahead of time and make the right decision. In this app, a single player can play with the bot. This app is also a PWA and can be installed for a better gaming experience.
